Students learn differently, at different speeds and with different starting points. But no education system in the world can afford a tutor for every child, So, how can we make our learning EASIER for a student?.

So this is where the bot which might be able to step in. this bot will help in delivering the personalized learning where a learner can learn at the pace at which one is comfortable. It will place greater emphasis on certain topics which get uncleared, repeating things that the learner hasn't mastered.

Basically, it provides the roadmap to all the students who didn't get the proper guidance from others.

From our first page, it is very simple that our motto is to make education more interesting for everyone.

Then there will be a chatbot that will ask some basic questions of the user's domain. By which our bot will analyze the answers and will predict the best suitable courses for the user (learner) and will provide the roadmap to move ahead in the domain and
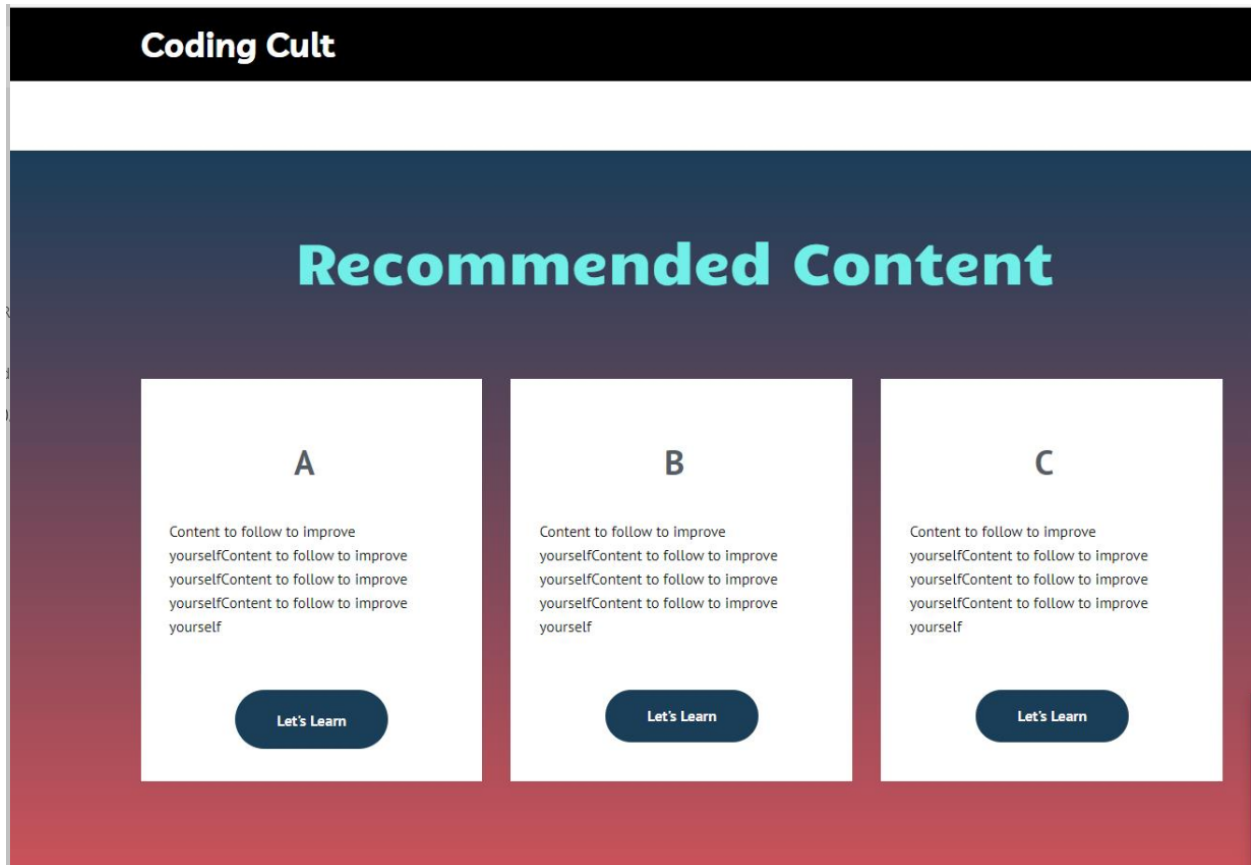

can become experts.
